How Do I Use the 460BCDFM-N34 in My Application?

For most applications the mapping is very straightforward. PLC data table values like N7:200 and F9:1 are mapped directly to BACnet analog and binary values. It really is that simple.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
