Deliver Data from your BACnet MS/TP Manager to an ASCII-Based System or Controller

The 460BMSA moves data between a BACnet MS/TP Manager device and serial ASCII.

It's a great tool to implement BACnet MS/TP devices into your PC or embedded applications that support raw ASCII data.

How Do I Use the 460BMSA-N34 in My Application?

Up to 1280 BACnet/IP objects can be mapped to and from your BACnet/IP server devices. The data segments can be converted to ASCII. Incoming ASCII string data can be parsed and each segment can be directed BACnet objects.

Need to scale your data or manipulate it with other math functions? The 460BMSA allows you to add scaling to any data, apply simple math operations, add alarming, and control the request speeds of your Manager device.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: **To move your data where you need it, when you need it, and how you need it.**
