Connect a BACnet MS/TP Manager Device to a PROFIBUS Controller

The 460BMSPBS moves data between a BACnet MS/TP Manager and a PROFIBUS DP controller. It's the perfect tool to tie in all the BACnet MS/TP devices in your automation system to PROFIBUS.
Bridge your factory automation systems with your building automation systems.
How Do I Use the 460BMSPBS-NNPB in My Application?

BACnet MS/TP data will be mapped into 10 PROFIBUS DP slots. The Slot can consist of up to 244 bytes of data from your BACnet MS/TP Manager device. When writing from your PROFIBUS controller to your BACnet MS/TP Manager, there will be up to 10 slots each defined by the same types. Data in those slots can be mapped to your BACnet MS/TP Manager device.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
