Get Ethernet TCP/IP Data into your BACnet MS/TP subordinate Devices

The 460BMTCP moves data between up to 10 Ethernet TCP/IP devices and up to 32 BACnet MS/TP Subordinate devices. It's a perfect tool to tie Ethernet TCP/IP devices into your BACnet MS/TP building automation system. A great tool to connect printers, RFID devices, LED displays and PC applications to a BACnet MS/TP system.

How Do I Use the 460BMTCP In My Application?

BACnet analog, binary, and CSV data segments can be converted to ASCII and delivered to your ASCII controller. If you need to command the BACnet/IP servers, an incoming ASCII string can be parsed and directed to user-defined data location.

It's really that simple. Need to modify your data as it passes from one protocol to the other? No problem. Each data mapping you apply can be modified with up to three mathematic functions. Need to add or remove delimiters between segments, it does that too.
