Connect EtherNet/IP Adapter Devices to a BACnet MS/TP Manager

The 460ECBM moves data between a network of up to 32 BACnet MS/TP Subordinate devices and an EtherNet/IP network of up to 32 adapter devices. It's the perfect tool to tie all of your EtherNet/IP devices in with your BACnet/IP devices. Bridge your factory automation systems with your building automation systems.

How Do I Use the 460ECBM-NNA4 in My Application?

Up to 496 of data from your EtherNet/IP adapters will be mapped to your BACnet MS/TP Subordinates. When writing from your BACnet MS/TP Subordinates to your EtherNet/IP adapters, BACnet MS/TP data will be mapped to up to 32 EtherNet/IP adapters as EtherNet/IP data.
It's really that simple. Need to modify your data as it passes from one protocol to the other? No problem. Each data mapping you apply can be modified with up to three mathematic functions. Add 4 to a value, multiply by 4 and divide by 10 with ease.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.
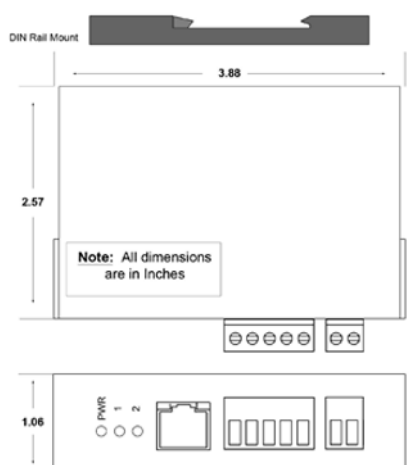

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
