Connect EtherNet/IP Adapter Devices to a Modbus RTU Client

The 460ECMRS moves data between up to 32 EtherNet/IP and a Modbus RTU controller. You now have a great tool to integrate newer EtherNet/IP devices into legacy Modbus RTU systems.
Perfect for interfacing to legacy Modbus controller and a great way to utilize a low cost Modbus logging solution on your EtherNet/IP devices.

How Do I Use the 460ECMRS-N700 in My Application?

Up to 496 bytes of EtherNet/IP data can be mapped in each direction from up to 32 devices. Once the data is manually entered for each EtherNet/IP connection, the data is automatically mapped by the gateway to Modbus RTU.
It really is that simple.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: **To move your data where you need it, when you need it, and how you need it.**
