### Connect Modbus RTU Servers to an EtherNet/IP Scanner

The 460ESMM connects up to 32 Modbus RTU Servers to an EtherNet/IP controller. It's the perfect tool to save legacy Modbus RTU devices from the scrap pile and utilize the huge variety of Modbus RTU devices available in your EtherNet/IP architectures.

Best of all, the product comes with 5-year warranty.

### How Do I Use the 460ESMM-N34 in My Application?

Modbus register and coil data is mapped to EtherNet/IP IO data blocks. EtherNet/IP data is mapped directly to your Modbus RTU Servers. Up to 480 bytes of data can be moved in each direction between Modbus RTU and EtherNet/IP.

It really is that simple.

### Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

**A Solution, A Philosophy, the RTA Way.** We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: **To move your data where you need it, when you need it, and how you need it.**
