The Easiest Way to Integrate ASCII Data into an Allen-Bradley PLC

The 460ETCA moves data between up to two serial ASCII devices and one to five Allen-Bradley PLCs.
With the 460ETCA, you now have a solution to get ASCII weather stations, UPS systems and any other ASCII devices that output a compound ASCII string connected to your Allen-Bradley PLC.

How Do I Use the 460ETCA-N34 in My Application?

Incoming and outgoing ASCII data is mapped to and from user-defined tags or registers in the data table of your A-B PLC. One area is write only locations accepting data from the ASCII device. The other is read blocks to send data to your ASCII device.
If your device uses delimiters, the 460ETCA can be configured to automatically remove them. If you need to parse your data, the 460ETCA can parse a string of ASCII data in up to 50 segments by delimiter or offset.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
