Connect Allen-Bradley PLCs to Your S7 PLCs over Wi-Fi

The 460ETCSC moves data wirelessly between Allen-Bradley PLCs and up to 5 Siemens S7 PLCs over Wi-Fi using Wi-Fi IEEE 802.11 b/g/n at 2.4GHz with AES encryption 128-bit.

With the 460ETCSC, you are making a direct connection between S7 PLC data and user-defined tags or registers in the data table of your Allen-Bradley PLC. There is no polling from the PLC or EtherNet/IP scan lists to arrange.

How Do I Use the 460ETCSC-N2EW in My Application?

You allocate two blocks of tag/register in your Allen-Bradley PLC. One area for reads and one for writes. Those locations are mapped to corresponding memory block addresses in your S7 PLC.

It's really that simple. Need to modify your data as it passes from one protocol to the other? No problem. Each data mapping you apply can be modified with up to three mathematic functions.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
