Manipulate Modbus TCP/IP Server Data Moving to a Modbus TCP/IP Client

The 460MCMS moves data between up to 32 Modbus TCP/IP server devices and a Modbus TCP/IP client over Wi-Fi using Wi-Fi IEEE 802.11 b/g/n at 2.4GHz with AES encryption 128-bit.
With the 460MCMS, register and coil data can freely move between any devices connected to the gateway.

How Do I Use the 460MCMS-N2EW in My Application?

The 460MCMS is designed for those times when you have to manipulate your data, slow down the flow of data, or allow a client to handle more servers than it supports. The 460MCMS allows you to add scaling to data, apply math operations, add alarming, and control the request speeds of your server devices. It can also concatenate multiple server devices into one device allowing your client to communicate with more devices.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: **To move your data where you need it, when you need it, and how you need it.**
