Get Your Modbus RTU Server Devices Connected to a PROFIBUS DP PLC

The 460MMPBS moves data between up to 32 Modbus RTU Server devices and a PROFIBUS DP-enabled PLC. With the 460MMPBS, you are making a direct connection between Modbus RTU Server data and user-defined slots in your PROFIBUS DP PLC.

Best of all, the product is made in the USA and comes with 5-year warranty.

How Do I Use the 460MMPBS-NNPB in My Application?

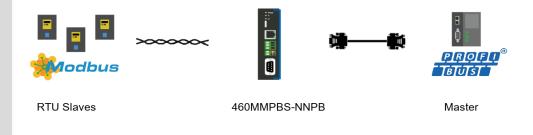

Modbus RTU Server register and oil data will be mapped into 10 PROFIBUS DP slots. The slots will be assigned a typed of Int8, int16, int32, int64, UInt8, Uint16, Uint32, Uint64, float, double, binary8, binary16, or binary32.

When writing from your PROFIBUS DP master to your Modbus RTU devices, the data in the slots can be mapped to registers and coils in any Modbus RTU Server.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: To move your data where you need it, when you need it, and how you need it.
