Connect a Modbus TCP/IP Client to BACnet MS/TP

The 460MSBMS moves data between a Modbus TCP/IP client and a BACnet MS/TP Building Automation System (BAS). It's a perfect tool to get your Modbus TCP/IP data tied in with your BACnet MS/TP building automation system.
Best of all, the product comes with 5-year warranty.

How Do I Use the 460MSBMS-N34 in My Application?

Modbus register data is mapped to BACnet analog objects and Modbus coil data is mapped to binary objects on BACnet. The final step to add meaning names to each BACnet object for easy discovery in the BMS.
It's really that simple. Need to modify your data as it passes from one protocol to the other? No problem. Each data mapping you apply can be modified with up to three mathematic functions.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
