Get Your Modbus TCP/IP Client Device Connected to a PROFIBUS DP Controller

The 460MSPBS moves data between a Modbus TCP/IP client device and a PROFIBUS controller device.

With the 460MSPBS, you are making a direct connection between Modbus TCP/IP client data and user-defined slots in your PROFIBUS device.

How Do I Use the 460MSPBS-N70PB in My Application?

Modbus TCP/IP client register and coil data will be mapped into 10 PROFIBUS DP slots. The slots will be assigned a typed of Int8, int16, int32, int64, UInt8, UInt16, UInt32, UInt64, float, double, binary8, binary16, or binary32.

When writing from your PROFIBUS controller to your Modbus TCP/IP device, the data in the slots can be mapped to registers and coils in the Modbus TCP/IP client.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: **To move your data where you need it, when you need it, and how you need it.**
