Bridge Siemens Controllers to an MQTT Cloud Based Platform

The 460SCQT moves data between a Siemens controller and an MQTT platform.
Allowing you to easily log data and leverage in populating dashboards.
Best of all, the product comes with 5-year warranty.

How Do I Use the 460SCQT-N2E in My Application?

You map an input of and output block on memory in the data table of the Siemens PLC to topics published or subscribed to in an MQTT broker.
SSL transport layer security protects the data moving from your operations network to the cloud.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: **To move your data where you need it, when you need it, and how you need it.**
