Connect your OPC UA clients to DF1 slave device

The 460USDFM moves data between OPC UA clients and DF1 slave devices. Allowing you to easily log data and leverage for populating data in dashboards. Best of all, the product comes with 5-year warranty.

How Do I Use the 460USDFM-N2E in My Application?

For most applications, the mapping is very straightforward. OPC UA data is mapped to files in the PLCs data tables. Those values are then mapped to mating file locations in the DF1 devices like N7:200 or F9:1.

SSL transport layer security protects the data moving from your operations network to the cloud.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
